

CMS Integrations

Integrating your content management system (CMS) with an emailing platform such as MailUp is an important step for extending the functionalities of your system. The extensions we developed make it easy to add an email sign-up form to your website, and manage & send email campaigns through the MailUp platform or directly from your CMS (via [SMTP relay](#)).

Check out our extensions for:

- [WordPress](#)
- [Blogger](#)
- [Drupal](#)
- [Joomla!](#)

Custom integrations

MailUp can be integrated with other web applications by using the [MailUp API](#).

If you are interested in integrating your CMS system with our emailing platform (e.g. because a client of yours requested it), [please contact us](#) as there may be ways for us to support your efforts.
