

WS_MailUpSend.SendSMSFast

Creates and sends a text message (SMS) via a unique call

Method parameters

- `string` SendSMSFast(`string` accessKey, `int` listID, `string` subject, `string` text, `Option[]` options)
 - *accessKey*: access key obtained using the [LoginFromId](#) method
 - *listID*: list identifier. Lists and corresponding IDs can be obtained calling the [GetLists Method](#)
 - *subject*: subject of the text message
 - *text*: body of the text message
 - *options*: an array of key/value pairs for options setting. All the options listed for the [WS_MailUpSend.CreateSMS](#) and [WS_MailUpSend.SendSMS](#) are available for this method as well.

If error code=0, the message will contain the ID of the sending

SOAP Examples
