

Email Analysis

Improve the impact of your messages with EmailAnalysis, a powerful tool, now free of charge, that performs a check on the compatibility of the message you are about to send.

By clicking on "**Full analysis**", you can preview your message on 48 email clients (3 if you choose the **quick analysis**). The full analysis may take a few minutes to be completed:

The screenshot shows the top navigation bar with tabs: Edit, Checkup (selected), Test send, and Send. Below this is a secondary row of tabs: Summary, Previews (selected), Link check, Spam check, Code review, and Text version. The main content area is titled "Using email programs (e.g. Gmail, Outlook, ...)" and contains two buttons: "Quick preview" with the description "We will capture screenshots of how the message looks in a few email clients." and "Full preview" with the description "Same as above, but using many more email clients." Below this is a section titled "Using your browser" with a button "View browser preview" and the description "This is the same message preview accessible elsewhere in the system. It does not use an email client."

In the images below...

a Quick Preview

The screenshot shows the "Quick Preview" section of the tool. It features a navigation bar with tabs: Edit, Checkup (selected), Test send, and Send. Below this is a row of tabs: Summary, Previews (selected), Link check, Spam check, Code review, and Text version. The main content area is titled "Retry missing previews" and displays three preview cards. The first card is titled "Gmail Windows Firefox" and shows a screenshot of the email in a Gmail interface on a Windows Firefox browser. The second card is titled "Gmail Mac Firefox" and shows a screenshot of the email in a Gmail interface on a Mac Firefox browser. The third card is titled "Outlook 2003" and shows a screenshot of the email in an Outlook 2003 interface. The email content in all three previews is a promotional message for "10% OFF ALL TOURS" from "DETOUR of Norway".
