Obtaining MailUp account details for the connected account

This is probably the easiest way to test if your application is properly connected to the MailUp console account that has been specified during login.

Description	Returns profile info for authenticated user account
HTTP Method	GET
URL	https://services.mailup.com/API/v1.1/Rest/ConsoleService.svc/Console/Authentication/Info
JSON request parameters (example)	none
JSON response (example)	<pre>{ "Company": "MailUp", "ExpiryDate": "2016-12-09 00:00:00.000", "IsTrial": true, "UID": "388", "Url": "<your account url>", "Username": "m1234", "Version": "9.0.0" }</pre>
Paging and filtering (example)	none

If you need more details about your account, i.e. the total amount of credits or how they are broken down by list, please use the following method

Description	Returns detailed profile info for authenticated user account
HTTP Method	GET
URL	https://services.mailup.com/API/v1.1/Rest/ConsoleService.svc/Console/Authentication/Details
JSON request parameters (example)	none
JSON response (example)	<pre>{ "AutoRenewal": true, "Company": "MailUp", "CreditsByList": [{ "Credit": 0, "ListId": 1 }, { "Credit": 0, "ListId": 10 }], "Email": "<your email>", "ExpiryDate": "2016-12-09 00:00:00.000", "IsTrial": false, "Lang": "IT", "Plan": 4, "TotalCredits": 0, "UID": "388", "Url": "<your account url>", "Username": "m1234", "Version": "9.0.0" }</pre>
Paging and filtering (example)	none

Creating a new MailUp account via the MailUp API

MailUp accounts can be created remotely by authorized applications.

This can provide a better user experience where the user of the connected application is allowed to quickly create a new trial account directly from within the application.

See [this page](#) for details.
