

WS_MailUpSend.CreateSMS

Allows the creation of a text message (SMS) within the desired list.

Method parameters

- `string` CreateSMS(`string` accessKey, `int` listID, `string` subject, `string` text, `Option[]` options)
 - *accessKey*: access key obtained using the [LoginFromId](#) method
 - *listID*: ID of the list within which the text message has to be created. Lists and corresponding IDs can be obtained calling the [Get Lists Method](#)
 - *subject*: subject of the text message
 - *text*: body of the text message
 - *options*: an array of key/value pairs for options setting
 - *note*: a string containing notes about the message
 - *dyn_fid*: boolean value to enable/disable the use of dynamic fields in the message (`dyn_fid=true`, `dyn_fid=false`)
 - *from*: sender of the text message (note: restrictions may apply in some countries and the sender may be overwritten, please contact us for country specific information)
 - *isUnicode*: boolean value indicating whether to use Western alphabets only (`false`), or Eastern alphabets as well, such as Arabic, Russian, Chinese, and so on (`true`).

If error code=0, the message will contain the ID of the text message which has been created

SOAP Example

SOAP Response

```
<CreateSMSResult>
  <errorCode>0</errorCode>
  <errorDescription></errorDescription>
  <listID>1</listID>
  <smsID>3</smsID>
</CreateSMSResult>
```
