

WS_MailUpSend.ScheduleSMSQueue

Sets/edits the scheduling of a text message (SMS)

Method parameters

- `string` `ScheduleSMSQueue(string accessKey, int listID, int smsID, int scheduleID, string deliverydt, int timezone)`
 - *accessKey*: access key obtained using the [LoginFromId](#) method
 - *listID*: list identifier. Lists and corresponding IDs can be obtained calling the [GetLists Method](#)
 - *smsID*: ID of the text message
 - *scheduleID*: ID of the schedule
 - *deliverydt*: a string containing date and time of scheduled delivery, in the format yyyyMMddHHmmss. If not specified, the sending starts immediately, and in case another sending is in progress the message is queued
 - *timezone*: an integer indicating the time zone

SOAP Example

SOAP Response

```
<ScheduleSMSQueueResult>
  <errorCode>0</errorCode>
  <errorDescription></errorDescription>
  <schedule>Delivery scheduled at 30/09/2009 9:30:00 GMT 1</schedule>
</ScheduleSMSQueueResult>
```
