

Dynamic pop-ups

You can use this app, integrated with MailUp, to prompt site visitors to subscribe when certain conditions occur.

Create signup widgets, exit-intent popups and landing pages inside your website and automatically sync collected emails with your MailUp lists. No coding is required, you just need add a widget code in your website and then you will control campaigns and results in your Privy dashboard.

Note: This integration has not been developed by MailUp. We list integrations developed by third parties for customer convenience only. We do not offer any support or guarantee on these products. Please contact the developer for any inquiry.
